Abstract

This paper will discuss the benefits and drawbacks from the point of view that globalization made in the developing countries in the three important fields such as economic and trade processes, education and health systems and culture effects. It consists of four paragraphs. In paragraph one, the benefits and detriment of globalization in the economic and trade processes field will be discussed. Then, in paragraph two, the impact of globalization on education and health systems in both sides will be shown. In the paragraph three, the positives and negatives of globalization on culture will be illustrated. Finally, paragraph four, will deal with conclusion and offer an opinion.

Introduction

Globalization is a process of global economic, political and cultural integration. It has made the world become a small village; the borders have been broken down between countries. *"The history of globalization goes back to the second half of the twentieth century, the development of transport and communication technology led to situation where national borders appeared to be too limiting for economic activity"* (Economic Globalization in Developing Countries, 2002). Globalization is playing an increasingly important role in the developing countries. It can be seen that, globalization has certain advantages such as economic processes, technological developments, political influences, health systems, social and natural environment factors. It has a lot of benefit on our daily life. Globalization has created a new opportunities for developing countries. Such as, technology transfer hold out promise, greater opportunities to access developed countries markets, growth and improved productivity and living standards. However, it is not true that all effects of this phenomenon are positive. Because, globalization has also brought up new challenges such as, environmental deteriorations, instability in commercial and financial markets, increase inequity across and within nations.

This paper evaluates the positive and negative impact of globalization on developing nations in the following proportions;

- 1- Economic and Trade Processes Field
- 2- Education and Health Systems
- 3- Culture Effects

1- Economic and Trade Processes Field

Globalization helps developing countries to deal with rest of the world increase their economic growth, solving the poverty problems in their country. In the past, developing countries were not able to tap on the world economy due to trade barriers. They cannot share the same economic growth that developed countries had. However, with globalization the World Bank and International Management encourage developing countries to go through market reforms and radical changes through large loans. Many developing nations began to take steps to open their markets by removing tariffs and free up their economies. The developed countries were able to invest in the developing nations, creating job opportunities for the poor people. For example, rapid growth in India and China has caused world poverty to decrease (blogspot.com.2009). It is clear to see that globalization has made the relationships between developed countries and developing nations stronger, it made each country depend on another country. According to Thirlwall (2003:13) " Developing countries depend on developed countries for resource flows and technology, but developed countries depend heavily on developing countries for raw materials, food and oil, and as markets for industrial goods". One the most important advantages of globalization are goods and people are transported easier and faster as a result free trade between countries has increased, and it decreased the possibility of war between countries. Furthermore, the growth in the communication between the individuals and companies in the world helped to raise free trade between countries and this led to growth economy. However, globalization has many economy and trade advantages in the developing countries, we must also note the many disadvantages that globalization has created for the poor

countries. One reason globalization increases the inequality between the rich and poor, the benefits globalization is not universal; the richer are getting rich and the poor are becoming poorer. Many developing countries do benefit from globalization but then again, many of such nations do lag behind." In the past two decades, China and India have grown faster than the already rich nations. However, countries like Africa still have the highest poverty rates, in fact, the rural areas of China which do not tap on global markets also suffer greatly from such high poverty (blogspot.com.2009). On the other hand, developed countries set up their companies and industries to the developing nations to take advantages of low wages and this causing pollution in countries with poor regulation of pollution. Furthermore, setting up companies and factories in the developing nations by developed countries affect badly to the economy of the developed countries and increase unemployment.

2- Education and Health Systems

Globalization contributed to develop the health and education systems in the developing countries. We can clearly see that education has increased in recent years, because globalization has a catalyst to the jobs that require higher skills set. This demand allowed people to gain higher education. Health and education are basic objectives to improve any nations, and there are strong relationships between economic growth and health and education systems. Through growth in economic, living standards and life expectancy for the developing nations certainly get better. With more fortunes poor nations are able to supply good health care services and sanitation to their people. In addition, the government of developing countries can provide more money for health and education to the poor, which led to decrease the rates of illiteracy. This is seen in many developing countries whose illiteracy rate fell down recently. It is truth that, living standards and life expectancy of developing countries increase through economic gains from globalization. According to the World Bank (2004) " With globalization, more than 85 percent of the world's population can expect to live for at least sixty years and this is actually twice as long as the average life expectancy 100 years ago". In addition, globalization helped doctors and scientists to contribute to discover many diseases, which spread by human, animals and birds, and it helped them to created appropriate medicines to fight these deadly diseases. For example, HIV/AIDS, swine flu and birds' flu whole world know about these diseases and they know how to avoid it. By globalization, there are many international organizations, such as, Non-governmental Organization (NGO), World Health Organization (WHO) and UNESCO, trying to eliminate illiteracy and deadly diseases in the world and save the life. In spite of these positive effects of globalization to the education and health fields in the developing countries. However, globalization could have negative impacts also in these fields; globalization facilitates the spread of new diseases in developing nations by travelers between countries. Due to increased trade and travel, many diseases like HIV/AIDS, Swine Flu, Bird Flu and many plant diseases, are facilitated across borders, from developed nations to the developing ones. This influences badly to the living standards and life expectancy these countries. According to the World Bank (2004) "The AIDS crisis has reduced life expectancy in some parts of Africa to less than 33 years and delay in addressing the problems caused by economic". Another drawback of globalization is, globalized competition has forced many minds skilled workers where highly educated and qualified professionals, such as scientists, doctors, engineers and IT specialists, migrate to developed countries to benefit from the higher wages and greater lifestyle prospects for themselves and their children. This leads to decrease skills labour in the developing countries.

3- Culture Effects

Globalization has many benefits and detriment to the culture in the developing countries. Many developing countries cultures has been changed through globalization, and became imitate others cultures such as, America and European countries. Before globalization it would not have been possible to know about other countries and their cultures. Due to important tools of globalization like television, radio, satellite and internet, it is possible today to know what is happening in any countries such as, America, Japan and Australia. Moreover, people worldwide can know each other better through globalization. For example, it is easy to see more and more Hollywood stars shows the cultures different from America. In addition, today we can see clearly a heavily effect that caused by globalization to the young people in the different poor nations, it is very common to see teenagers wearing Nike T-Shirts and Adidas footwear, playing Hip-Hop music, using Apple ipad and iphone and eating at MacDonald, KFC and Domino's Pizza . It is look like you can only distinguish them by their language. One the other hand, many developing countries are concerned about the rise of globalization because it might lead to destroy their own culture, traditional, identity, customs and their language. Many Arab countries such as Iraq, Syria, Lebanon and Jordan, as developing countries have affected negatively in some areas, their cultures,

customs and traditional have been changed. They wear and behave like developed nations, a few people are wearing their traditional cloths that the used to. Furthermore, globalization leads to disappearing of many words and expressions from local language because many people use English and French words. In addition, great changes have taken place in the family life, young people trying to leave their families and live alone when they get 18 years old, and the extended family tends to become smaller than before (Kurdishglobe, 2010).

Conclusion

In conclusion, as we can see, the process of globalization has involved all the countries around the world. Developing countries such as India, China, Africa, Iraq, Syria, Lebanon and Jordan have been affected by globalization, and whether negatively or positively, the economies of these countries have improved under the influence of globalization. The size of direct foreign investment has increased and a lot of bad habits and traditions erased, but also globalization has brought many drawbacks to these countries as well. Many customs and cultures are disappeared such as traditions clothes and some language and expressions have changed. In addition, the violence and drugs abuse are increased and a lot of deadly diseases have spread under the influence of globalization. However, although globalization has many disadvantages, we believe that globalization has brought the developing countries many more benefits than the detriments. For example, we can see there is more and a biggest opportunity for people in both developed countries and developing countries to sell as many goods to as many people as right now, so we can say this is the golden age for business, commerce and trade

CALL FOR JOURNAL PAPERS

The IISTE is currently hosting more than 30 peer-reviewed academic journals and collaborating with academic institutions around the world. There's no deadline for submission. **Prospective authors of IISTE journals can find the submission instruction on the following page:** <http://www.iiste.org/journals/> The IISTE editorial team promises to review and publish all the qualified submissions in a **fast** manner. All the journals articles are available online to the readers all over the world without financial, legal, or technical barriers other than those inseparable from gaining access to the internet itself. Printed version of the journals is also available upon request of readers and authors.
