Drug faking is shaping towards realm for global health care system. It is very difficult for any agency or country alone to grip this impasse which is being governed by many manufacturers who sell their fake medicine with advanced sophistications. Counterfeit drugs have rarely been proved as efficacious; rather these drugs have been associated with serious adverse effects. Major problem is seen with antibiotic resistance. Effect of this kind of terrorism is felt both by country of manufacture to country receiving these medicines. It has been said that counterfeit drugs have traditionally been more of a concern in developing regions (mostly Africa and Asia), where regulatory and enforcement systems for medicines are weak. However, counterfeiting has become more and more prevalent in developed countries as one example is being coded here. A company in Hollywood, Florida claimed for its product “Slim Xtreme Herbal Slimming Capsule” as 100 % natural remedy for weight loss, while the Food and Drug Administration (FDA) is advising consumers not to purchase or use “Slim Xtreme Herbal Slimming Capsule,” a product for weight loss sold on various websites. One report says US counterfeit drug seizures up 200 per cent in 2011. So it will be difficult to assume that matter is persistent only in developed world. Many underdeveloped countries have tried to combat with counterfeiting for example Nigerian National Agency for Food and Drug Administration and Control (NAFDAC) is the government agency in Nigeria that is fully empowered to regulate and control the importation, exportation, manufacture, advertisement, distribution, sale and use of drugs in order to ensure that safe and quality drugs are available to the public. They concluded that they were unable to grip this threat of counterfeiting.

When we talk about primary source of counterfeit medicines and goods China remained the primary source of counterfeit pharmaceuticals. The top 10 source countries - in descending order - were: China; Hong Kong; India; Pakistan; Taiwan; Switzerland; Malaysia; South Korea; UK; and Mexico. Counterfeiting is accomplished usually by two major ways; by international mail and express courier services for transporting illegal merchandise and the continued growth of websites selling counterfeit goods directly to the public.

WHO took a global initiative in 2006 in the form of IMPACT— the International Medical Products Anti-Counterfeiting Taskforce. Much is being talked from the IMPACT forum that how to define counterfeiting and ways to eradicate it. But some countries like India, Brazil and some NGO's are not agreed with the work offered by IMPACT. Its areas of focus are:

- Legislative and regulatory infrastructure
- Regulatory implementation
- Enforcement
- Technology
- Communication

There is need to hearten the theme that there should be some world treaty organization to counteract with this global health care threat of counterfeit medicines.

This academic article was published by The International Institute for Science, Technology and Education (IISTE). The IISTE is a pioneer in the Open Access Publishing service based in the U.S. and Europe. The aim of the institute is Accelerating Global Knowledge Sharing.

More information about the publisher can be found in the IISTE's homepage:

<http://www.iiste.org>

The IISTE is currently hosting more than 30 peer-reviewed academic journals and collaborating with academic institutions around the world. **Prospective authors of IISTE journals can find the submission instruction on the following page:**

<http://www.iiste.org/Journals/>

The IISTE editorial team promises to review and publish all the qualified submissions in a fast manner. All the journals articles are available online to the readers all over the world without financial, legal, or technical barriers other than those inseparable from gaining access to the internet itself. Printed version of the journals is also available upon request of readers and authors.
