### **Abstract**

Petroleum, which is also known as “black gold” was discovered in commercial quantity in Nigeria in 1956. The discovery was unmistakably assumed to mark a turning point for radical economic transformation and development in Nigeria. However, over fifty years of petroleum exploration have left many people in dilemma whether it is a curse or blessing. Instead of economic progress, Nigeria seems to plummet despite the multi-millions petrodollars accruable from daily explorations. This sharply contrasts with the experiences of countries like Saudi Arabia, Venezuela, Libya and Qatar among others. It is based on this background; this study takes a panoramic historical investigation into this paradox of reality considering the current trend of economic doldrums and poverty in Nigeria. The study uses historical and comparative tools of analyses to provide insight into the petroleum exploration within the nexus of two schools of thought.

**Keywords:** Nigeria, Petroleum, Agriculture, Niger/Delta, Poverty and Corruption.

### **Introduction**

Nigeria, the focus of this study is the most populous black nation and seventh in the world as a whole. According to National Population Commission of Nigeria, the population of Nigeria was estimated at One Hundred and Seventy Million (170, 000 000) people as at December, 2013 (National Population Commission 2013:3). It has an area of 923,768.00 square kilometres with about 36 states and 776 local government areas. The region lies between Latitudes 40 and 140 North of the equator and Longitude 30 and 140 East of the Greenwich meridian (Udo 1980: 1-7). It is bordered to the north by Niger Republic, Gulf of Guinea to the south, an arm of the Atlantic Ocean, and Republic of Benin to the west and Republic of Cameroun to the east. The country is drained by two major rivers - Niger and Benue. These two rivers meet at Lokoja, the confluence town before emptying into the Atlantic Ocean. The outlets of these rivers and their tributaries are masked by the walls of mangroves. Behind this barrier, lay calm lagoons, which extend from the western border of the great Niger. At its Delta where the river breaks into a network of creeks and water ways, they provide valuable means of navigation through this marshy part to the interior. In addition, the region becomes the locus of Nigeria's economy since 1958.

Nigeria is populated by people of different origins, culture and histories. Paul inferred that over Two Hundred and Fifty ethnic nationalities clustered within the region and were independent of one another before they were amalgamated by the British Government in 1914 under the leadership of Frederic Lord Lugard, the first British Governor-General of Nigeria (Paul 2011:57-69). These group of people have been together since the British established its colonial administration over them.

### **Nigeria's Economy before the Discovery of Crude Oil**

The climatic factor is significant, not only in relation to its effect on the character of the vegetation, but it also plays a dominant role in the ways of life, including the pattern of economic activities of the various people. As in other part of the tropics, rainfall is the most important element of climate in so far as agriculture, the main occupation of Nigeria's people. The rhythm of economic activity which is revealed in the farming calendar of the various parts of the country is controlled by the incident and distribution of rainfall as well as the rainy season, which decreases from south to north. Mangrove region of the southern Nigeria with high rainfall per annum supports the growth of palm trees, rubber, coffee and cocoa etc. The savannah grassland to the north supports the planting of cereal and leguminous crops such as sorghum, millet, ground nuts as well as animal rearing mostly for hide and skin (Ekundare 1973:56-56; Ake 1985:102-106). Agriculture was the mainstay of Nigeria's economy from the earliest time up to 1950s. Indeed, Nigerians had an enviable record of food sufficiency but the era did not last beyond the 1960s when its economy began a descent into an abysmal dependence on imports.

As part of the efforts to integrate Nigeria into global economy, cash crops were introduced to Nigeria by the Europeans from South America and India (Oluwasanmi 1960: 34-36). Palm oil became an export commodity in Nigeria as far back as 1558; and by 1830, the Niger Delta, which now produces crude oil, had become the major source of palm oil which dominated Nigeria's export list for more than 50 years (Olukoju 2009:105-125). Cotton joined the export list in 1856, while cocoa was introduced and became an export crop in

1895 (Olukoju 2009:117). Together with rubber, groundnut, palm kernel and Bennie-seed in later years formed the major valuable crops. These cash crops formed the main source of revenue, export and foreign exchange for the government (Udo 1967: 18). It is very important to note that the economy generally recorded tremendous self-sustaining growth and expansion before crude oil became the mainstay. Nigeria boasted of its groundnut pyramids in the north and Cocoa in the west. Palm oil also existed in commercial quantity in the east. Revenue from agriculture was appropriately used to build landmark social and economic infrastructure, providing basic services like education, health, water and electricity supply. This enhanced farm settlements and cottage industries to service agriculture, providing vast employment opportunities for the people. In respect of food, the nation was self-sufficient before the era of crude oil. Agriculture provided 95% of the food needed to feed Nigerians, contributed 64.1% Gross Domestic Product (GDP) and employed over 70% of Nigerian population before oil began to be exported (Oluwasanmi 1960: 23-29).

### The Discovery of Oil in Nigeria

The search for Petroleum in Nigeria started in 1908 at Araromi area of the present Ondo State by a German Company known as Bitumen Corporation (Afe 2008: 28-32). This made Araromi the first camp of oil exploration outfit in Nigeria. However, Nigerian Bitumen Corporation ceased exploration as a result of the outbreak of World War I, which broke out in 1914-1918. In 1937, the Shell 'D' Arcy, which later became Shell BP Petroleum Development Company of Nigeria Limited, entered the oil exploration scene in Nigeria. However, the outbreak of World War II forced the company to suspend activities in Nigeria in 1941, but resumed activities again in 1946 (Afe 2008: 30). The first deep exploration well was drilled in 1951 at Ihuo, 16 kilometres northeast of Owerri, to a depth of 11, 228 feet, but no oil was found (Bamigbon:2009). Oil was later discovered at *Akata* well, which was drilled in 1953 but was suspended in 1954 due to its few quantity.

However, in January 1956, oil was discovered in commercial quantity at Oloibiri, now in Bayelsa State, by Shell BP (Fregene 1998:64-72). Towards the end of the same year, a second discovery was made at Afam now in Rivers State. The first Cargo crude oil left Nigeria in February 1958, when production stood at 6,000 barrels per day with revenue accounted for about ₦122 million. This contributed 0.08% to the National Revenue. As a result of Shell's success in the mid 1950s and thereafter, other companies, notably, Mobil, Gulf (Chevron), Agip, Safrap, (later Elf), Tenneco (later Texaco), Philips Great Basins Texaco Overseas and Union, joined Shell in prospecting for oil (Fregene 1998:66). The number of both international and local companies prospecting for Nigerian oil increased tremendously over time. The production in Bonny, Obolo (Andoni) and Ogoni, among others in the Niger Delta, between 1959 and 1960 raised the contribution of oil to 1.00% in 1960. Later the 606 oil producing field in the Delta region and its fringes from the second half of 1960s to 1975, led to crude oil replacing palm oil, cocoa and ground nuts in the national economy (Femi and Sesan 1968:83-94). As a result, petroleum became the dominant sources of the national revenue from 1974. The table below shows Petroleum Sector's Contribution to Nigerian Government (1958-1990):

Fiscal Year	Fed.Govt Current Revenue	Revenue from Petroleum	Share of Petroleum in total Revenue %	Fiscal Year	Fed. Govt Current Revenue	Revenue from Petroleum	Share of Petroleum in total Revenue
1958/59	154,632	122	0.08	1974/75	5,177,370	4,183,816	80.81
1959/60	177,648	1,776	1.00	1975/76	5,861,600	4,611,700	78.70
1960/61	223,700	2,452	1.00	1976/77	7,070,400	5,965,500	77.70
1961/62	228,962	17,070	7.46	1977/78	8,358,900	5,965,500	71.40
1962/63	231,638	16,936	7.31	1978/79	7,252,400	4,809,200	66.30
1963/64	249,152	10,060	4.04	1979/80	12,273,400	10,100,400	82.30

1973/74	2,171,370	1,549,383	71.36	1989/90	471,657,000	46,244,000	97.24

**Fig. I.**

Sources: Contribution of Federal Ministry Government and Oil Companies to Oil Producing Area, Vol. 1, Lagos: Nigeria National Petroleum Corporation (NNPC),1992.

The above shows an increase of oil production and revenue over a period of time. Between January and June 2003 for example, Nigeria had a financial wealth of ₦961.6 billion from crude oil. From July to December of the same year, the production of 405.09 million barrels, which sold at \$28.10 a barrel, brought ₦1.57 trillion (US \$11.38 billion) into the national treasury. Later, excess crude oil receipt gave Nigeria an additional ₦128.41 billion between May and December 2003 (Akintunde 2004:1&7). A monthly breakdown shows that in May, ₦7.65 billion was earned, June ₦13.67 billion, July ₦15.24 billion, August ₦9.7 billion, September ₦22.12 billion, October ₦14.17 billion, November ₦14.32 billion and ₦21.52 billion in December (Awajioke 2004:15). There was an appreciable increase in the production of crude oil and it was sold at the high price on the world market since Nigeria's oil was preferred due to its high quality. Nigeria is rated among the leading exporters of crude oil to United States of America. The table below shows the details:

Countries	Import Thousand Barrels per day	% of Total Import	% of Domestic Product Supplied
Canada	2,408	19.4%	11.3%
Mexico	1,487	12.0%	7.0%
Venezuela	1,485	12.0%	6.9%
Saudi Arabia	1,471	11.9%	6.9%
Nigeria	1,246	10.0%	5.8%
Angola	435	3.5%	2.0%
Algeria	405	3.5%	1.9%
Iraq	390	3.1%	1.8%
Virgin Islands	335	2.7%	1.6%
Ecuador	324	2.6%	1.5%
Others	2,422	19.5%	11.3%
Total	12,408	100%	58.0%
OPEC Countries	5,384	43.4%	25%
Persian Gulf Countries	2,166	17.5%	10.1%

### Assessment of Petroleum on Nigerian Economy

The discovery of oil in Nigeria in 1956 created a deep sense of humour because Nigerians were indeed, effervescent for the thought of better days. However, over fifty years of oil exploration, the experience has been adjured as a hope in despair (Sunday 2008). In the view of Senator Eze, Nigeria has not justified the gains of oil wealth. He stated further that, "it is empirically visible that Nigeria has failed to utilize its oil fortunes to improve the welfare of its citizens" (Tell 2008:27). The same cannot be said of other oil-endowed countries such as, Indonesia, Qatar, Bahrain, Kuwait, Abu Dhabi, Saudi Arabia, Mexico, Libya, Iraq, Iran, Russia, Norway, Egypt and Oman which have impacted positively on the lives of their citizens. Commenting on this, Ubadigbo Okonkwo, asserted that, rather than improving the welfare of Nigerians, Nigeria's civilian and military Governments have delivered low economic growth and increased poverty. Nigeria's oil wealth, rather than being a blessing, it has turned out to be a curse due to rent seeking activities, corruption, macro-economic instability, poor management of oil revenue and unstable and costly business environment (Ubadigbo 2009). It has become a subject of polemic among the intellectuals why the above named countries have used petrodollars to transform their economies to economic powerhouses and better the lot of their citizenry while Nigeria's experience remains a paradox of reality.

For the purpose of this study, a detailed historical excursion will be necessary. Nigeria was the giant of Africa in the 60s not because of its population but partly because of its economy. It would appear the glory has been lost. A comparative analysis of 10 selected African countries exposes the decline strength of Nigeria despite the millions of petrodollars Nigeria earns per day.

No	Country	GPD per a person, purchasing power-parity	Government Effectiveness	Political Instability	Anti-Corruption	Rule of Law
1	Mauritius	\$13,700	71.6%	79.3%	66.5%	75.7%
2	South Africa	\$13,300	76.8%	44.2%	70.9%	58.6%
3	Botswana	\$10,900	73%	93.9%	78.2%	67.1%
4	Angola	\$4,500	10.9%	28.8%	8.7%	7.1%
5	Senegal	\$1,800	47.4%	37.5%	41.7%	45.7%
6	Rwanda	\$1,600	38.8%	27.4%	55.8%	34.3%
7	<b>Nigeria</b>	<b>\$1,500</b>	<b>16.6%</b>	<b>3.8%</b>	<b>5.8%</b>	<b>8.1%</b>
8	Kenya	\$1,200	28%	15.4%	16%	15.7%
9	Liberia	\$900	6.6%	12.5%	20.4%	11%
10	DR Congo	\$700	1.9%	1%	2.9%	1.9%

**Fig. III**

Source: World Bank Report, 2007; TELL Magazine, 18, February, 2008, p. 99.

The above indicates the reports of 10 selected Africa nations with five basic development indices. It shows Nigeria as one of the poorest countries among the nations compared.

The discovery of oil according to Rilwan Lukman, one time Minister of Petroleum and former President, Organization of Petroleum Exporting Countries (OPEC), during the researcher's personal interview with him, asserted that petroleum has indeed brought good and evil things to Nigeria (Rilwan 2010). He believed that Oil has provided for the country considerable resources which have been deployed into various projects and have kept the economy going. In the first instance, according to him, more states and local governments have been created. Roads, air and sea ports were also constructed. Nigeria was able to execute two and half year civil war without indebted to any nation. Schools, primary, secondary, colleges of education, polytechnics and Universities were built across the nation through oil money. He however decried the discovery of oil and its poor management as being responsible for the decline of agriculture in Nigeria.

The researcher's critical engagement with other informants across Nigeria further furnishes our understanding that with the discovery of oil, Nigerian government jettisoned the ongoing agricultural project, which had been the main economic drive of Nigeria. This has turned Nigeria into a mono-cultural economy. For example, in the Niger Delta, the region that harbours the crude oil, men completely abandoned agriculture to women for menial jobs in the oil companies. Frank Kokori, a frontline trade unionist, corroborated this further when he noted during an interview that, "the advent of oil in Nigeria marked an unfortunate turning point in the nation's history as it led to the emergence of a crop of lazy citizens who lost the initiative to be productive." (Kokori 2010) He pungently pressed home his view when he lamented thus:

"The country became a dumping ground for imported goods as cheap dollars flowed ceaselessly from petroleum... the sad commentary about Nigerian situation are that it is one of the few countries that pump out more than two million barrel per day and still live in this primitive infrastructural situation... Oil boom has become oil doom." (Kokori 2010)

Other regions like in the north, which had been the major supplier of groundnut, and hide and skin; west for production of cocoa and coffee; and east for palm oil and kernels; all, have abandoned agriculture. The immediate implication is, the production of the afore-mentioned products have gone into outer oblivion. Not only that, Chief Arigbabu Solomon lamented that Nigeria's agriculture has fizzled out to the level that the nation is now a net importer of food where it was once known for its import of agriculture produce at the international market (Arigbabu 2013). The oil boom that started in 1973 prompted the Federal Government to embark on bogus but unrewarding projects at the expense of agriculture, which on the long run did not translate to any development or contributing any meaningful impact on the people. A good example is the moribund Ajaokuta Iron and Steel Company in Kogi State of Nigeria. The government proposed and spent billions of dollars for constructing the complex of the Steel Company. The first phase of the project covering an area of about 172 hectares of land at Ajaokuta was commenced in 1977 (Oyeyinka 1995:293). A similar project was the construction of three inland rolling mills with capacities of 210,00ty each was embarked on simultaneously in Jos, Katsina and Osogbo to complement as well as to enhance operations of the Ajaokuta Iron and Steel (Ajaokuta Project Report 1975). The projects were handled by German and Japanese firms. The first phase of these projects was commissioned in 1982 (Ajaokuta Project Report 1977). By 1986, they have become enclaves of wide animals because of economic crisis due largely to government mismanagement of resources and lack of

vision.

Similarly, Petroleum has also led to the legalization, institutionalization and canonization of corruption in Nigeria. It is tacitly prophetic, when Juan Pablo Perez Alfonso, the former Venezuela Oil Minister, called oil, “the devil excrement” (Sachs and Wrner 2012:106). This seems to have captured the views of many Nigerians who despite millions of petrodollars accruing daily to the nation still perceive it as a curse. Antonio Maria Costa, The Executive Director, United Nations Office on Drug and Crime (UNODC) opened a Pandora box at a three-day national seminar organized by the Economic and Financial Crimes Commission (EFCC), in Abuja in 2007. According to him, between 1960 when Nigeria became an independent and 1999 when democracy was restored, a staggering sum of \$400 billion was stolen and stashed away by a generation of corrupt rulers (Antonio Maria Coasta 2007:1). He went further to elucidate that, if \$400 billion bills are put in a row, you could make a path from here to the moon and back not once but 75 times. Bakare had carried out Nigerian Corruption Perception Index, 1996-2010 in the table below:

Year	Perception Index	No. of Countries Evaluated	Rate
1996	1.20	54	54
1997	1.30	52	52
1998	1.90	85	81
1999	1.90	99	96
2000	1.90	90	90
2001	1.60	102	100
2002	1.70	91	90
2003	1.40	133	132
2004	1.60	145	144
2005	1.90	158	154
2006	2.20	163	142
2007	2.20	183	127
2008	2.20	183	127
2009	2.70	180	130
2010	2.40	178	134

**Fig. IV**

Source: Adewale S. Bakare, “The Crowding-out Effects of Corruption in Nigeria: An Empirical Study” *E3 Journal of Business Management and Economics*, Vol. 2(2), August 2011, pp.59-68.

The table shows persistent growth of corruption over the years. Maitama Sule, Nigeria’s first Minister of Petroleum and one time Nigerians’ Ambassador to the United Nations, targently hit the point when he argued that, “it is quite unfortunate that too many of Nigeria’s leaders are not doing nearly enough to drag the followers into the 21<sup>st</sup> century that would enable them to enjoy the best possible existence.” (Tajudeen 2008:26) He lamented on the ugly nature of the leaders thus:

“The majority of Nigeria’s leaders are blatant thieves, incompetent morons, uninspiring mediocrities... and primitive, visionless or just plain lazy... too many of them squander their energies on ultimately futile political shenanigans or irresponsible partying... even the few who are smart, well-intentioned and willing to control their acolytes are too easily distracted and pretty disorganized and unproductive compared to their counterparts in the western world.” (Kogbara 2013:1-4)

He averred that military incursion into the Nigeria’s politics derailed the vision of the founding fathers of the nation... succeeding generations of leaders, he said, had done little to qualify as leaders...almost all... suffered the affliction of greed, corruption and immorality (Kogbara 2013: 5). On a the same terrain, Chinua Achebe became worried about the menace of corruption and its possible danger on Nigeria when he reiterated that corruption has passed the alarming and entered the fatal stage, and Nigeria will die if the leaders continue to pretend that she is only slightly indisposed (Achebe 2012: 249).

From historical and empirical viewpoints, the over reliance on oil at the detriment of other sectors of the economy such as agriculture, mining and industry has far reaching effects that have brought the country into the state of socio-political and economic anomy. In the first instance, the implication of over dependent on oil and negligent of agriculture began to manifest from 1980, when the problem of unemployment began to gather momentum in Nigeria. As at today, the problem with its accompaniments of crimes such as, armed robbery, kidnapping and Boko Haram among others have risen to the point that the corporate existence of Nigeria is threatened. Crime has grown to almost unmanageable level to the government at all levels. It appears the

government is bereft of the way out. Below is the unemployment rate, 1980-2009:

Year	Unemployment Rate	Year	Unemployment Rate	Year	Unemployment rate
1980	5.4	1990	5.5	2000	10.5
1981	7.1	1991	5.7	2001	3.6
1982	4.1	1992	7.5	2002	3.8
1983	10.2	1993	7.2	2003	3.3
1984	7.3	1994	8.8	2004	9.5
1985	6.1	1995	5.2	2005	6.4
1986	5.3	1996	8.3	2006	12.5
1987	7.3	1997	8.5	2007	12.5
1988	5.9	1998	7.8	2008	13.2
1989	4.0	1999	9.5	2009	13.7

**Fig. V.**

Source: Central Bank of Nigeria Statistical Bulletin, 1980-2009, as at December, 2010.

Obviously, it is the problem of unemployment that gave rise to the unlawful business of human abduction for ransom in Nigeria today. In this phenomenon, the rich or wealthy personalities in the society are kidnapped and kept hostage in kidnappers' den. He is allowed to communicate with his family members or associates through phone call to pay a fixed ransom to a designated account provided by the abductors. At times the abductors made deal of bargains with the relatives or associates to pay a fixed price or they choose the option of losing the victim. The unbearable danger and suffering the victims are exposed to usually make them agree to whatever amount the abductors demand in order to regain their freedom from the kidnappers' gulags even if the ransom demanded is to be borrowed. Uche Igwe argued in support of the above opinion that the problem of unemployment and poverty are two major factors exacerbating the rising violence and insecurity in Nigeria society (Uche 2014:22). Nigeria with its enormous resources and potentials is currently ranked among the poorest countries in the world. This was confirmed by the United Nations Education Scientific Organization (UNESCO) in its 2010 Global Monitoring Report, which revealed that about 92% of the Nigeria's population survives on less than 2 dollars daily while about 75% survives on less than a dollar daily (Amaku, et al:6). This probably informed the World Bank report estimation that 70% of the Nigeria's population lives below the poverty line. Thus, it concludes that the greatest challenge besetting the country is poverty amidst plenty.

It is factual that over dependent on oil has over the years promoted political turbulent in Nigeria. The political system in Nigeria is structured in such a way that the power that controls the political systems also controls the economy. This has elicited the development of die-hard politicians and even occasioned military intervention in Nigerian politics since 1966. The inordinate desire of the politicians to stay in power indefinitely and the military quests to rule hinge principally on the desire to control the resources generally referred to as "national cake". The Nigeria's federation is structured in such a way that the formula for sharing the resources favours the central government while the component bodies of the system are mere appendages. This over the years had resulted in the struggle for the controls of the centre. The implication of this development in another dimension has given rise to the awakening of consciousness for struggle for resource control. In the case, the agitation in the Niger/Delta region, which harbours the petroleum resources, will surface. The crisis in the region followed when the petroleum became the basis of the fiscal existence of Nigeria since 1970. The successive institutionalization of revenue sharing and power distribution tended to reinforce the politicisation of ethnic identity, and its mobilization in the struggle for power. Apart from the exclusion from the mainstream politics in Nigeria, the people of Niger/Delta capitalized on the environmental degradation to attract internal and international attention. This is located in the realm of environmental pollution, which oil explorations have brought. The untold environmental pollution and degradation of their soil and water advertently necessitated the interest of their elite. It derives ideological impetus from the activities of the Ogoni and Ijaw people, who inhabited the area. The Ogoni people under late Ken Saro-Wiwa formed the Movement for the Survival of Ogoni People (MOSOP). Ken Saro Wiwa and his people were able to attract international sympathy to the plight of the people of Niger/Delta, using his own people, Ogoni, as a point of reference. The point of argument is located in the fact that, the advent of oil exploration seems to have brought nothing good to the people in the region but massive ecological devastation through oil spillage (Eboe 1985: 56; Naanen 1995:109; Claude 1985: 43). The perceived laxity demonstrated by the Federal Government to the plight of the people led to the formation of a militant group known as Movement for the Emancipation of the Niger Delta (MEND). The group indiscriminately targeted foreign multinational companies involving in the oil industry to destroy their installations blaming them for the poverty and exploitation of local people and associated pollution, which has turned many of the fish-rich creeks into stagnant pools. Similarly, the militant groups also harry and abduct expatriates exploring petroleum in the Niger Delta to collect ransom from their various companies.

One issue that appears to have spurred anti-oil protests in the Niger/Delta, was the question of derivation as a revenue allocation formula. Some scholars are of the views that a fixed proportion of the generated revenue in a local area should be retained for the development of the area. The people in the Niger/Delta saw the formula as a form of palliative measure that would relieve them of their plight. Some decades later, it would appear that the Federal Government budgets were becoming increasingly depended on oil revenue, Niger/Delta, the oil producing region was allocated small proportion of the generated revenue from the region. The improper handling of the situation by the government led to the increasing wave community unrests and protests which became intensified in the 1990s at the behest of the Movement for the Survival of Ogoni People (MOSOP). It appears from the last two decade, ethnic consciousness towards what is accruable to them from the government became topical in any national issue. This partly advertently or inadvertently fans the ember of corruption in Nigeria.

### Conclusion

Nigeria is a well endowed nation in Africa continent both with mineral and human resources. The ecological factor from the time immemorial favours agricultural economy. Each of the regions was viable financially. Indeed, from the earliest time to late 1950s, agriculture remained the mainstay of Nigeria's economy. The Colonial Government, 1914-1960 ran its administration purely on agricultural economy. There was no jobless person and corruption was at its lowest ebbs. However, from 1956 when oil was discovered in it Niger/Delta littoral up to 1970s when oil booms started, the entire structure of Nigeria has changed. The dawn of Petroleum economy to some people has brought both blessings and curses to Nigeria. Others see this perception differently as nothing but curses. The former school of thought evaluates the gains of petroleum such as improved infrastructure, creation of more states and local government and the administrative running of the federation as part of petroleum enhancement for rapid development. On the other hand, the latter school of thought focused their arguments on the problems that accompanied the exploration of crude oil in Nigeria such as corruption, mono-cultural economy, poverty, joblessness, environmental pollution and violence to regard petroleum as a curse. In this context, this study acknowledges the arguments of both schools of thought. It is obvious that the discovery and exploration of petroleum for over fifty years in Nigeria has accompaniment of both positive and negative experiences just like other nations that are endow with oil. Without contradiction, Petroleum is neither a blessing nor a curse depending on the way the government handles it. The governmental policies on the exploration in Nigeria and the way the economy has been handled without planning and focus is the major problem since the discovery of crude oil, which has resulted in different crises in Nigeria's socio-political and economic structure.

The IISTE is a pioneer in the Open-Access hosting service and academic event management. The aim of the firm is Accelerating Global Knowledge Sharing.

More information about the firm can be found on the homepage:  
<http://www.iiste.org>

## CALL FOR JOURNAL PAPERS

There are more than 30 peer-reviewed academic journals hosted under the hosting platform.

**Prospective authors of journals can find the submission instruction on the following page:** <http://www.iiste.org/journals/> All the journals articles are available online to the readers all over the world without financial, legal, or technical barriers other than those inseparable from gaining access to the internet itself. Paper version of the journals is also available upon request of readers and authors.

## MORE RESOURCES
